Infrastructure

## Profile of office

**ingenieurbüro gieshold**

management of infrastructure  
projecting building supervision consulting

# Introduction and philosophy

The Gieshold Engineering Office, headquartered in Heilsbachstraße 17-19 in 53123 Bonn, has been working successfully in the Cologne / Bonn area for more than 25 years.

As an owner-managed engineering office, we are optimally fulfilling the various and varied requirements of the upcoming projects through our interdisciplinary knowledge.

Our range of services focuses on classical civil engineering tasks, the development of commercial and residential properties, tasks from the drainage and rain- and wastewater treatment sector as well as flood and water protection.

Our field of activity encompasses all performance phases of the HOAI.

In the main area we carry out projects for public authorities, municipalities and for private construction and development companies as well as industrial and commercial enterprises.

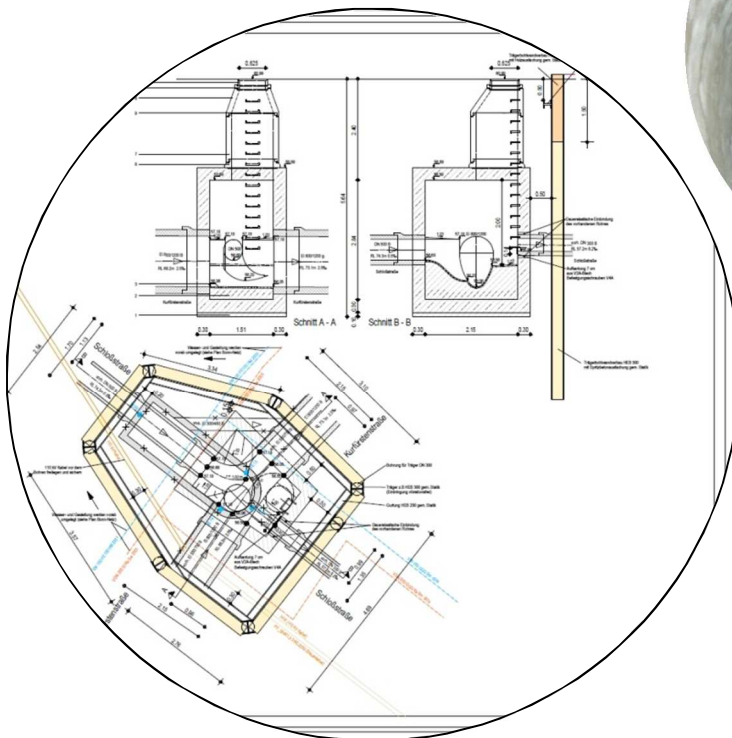

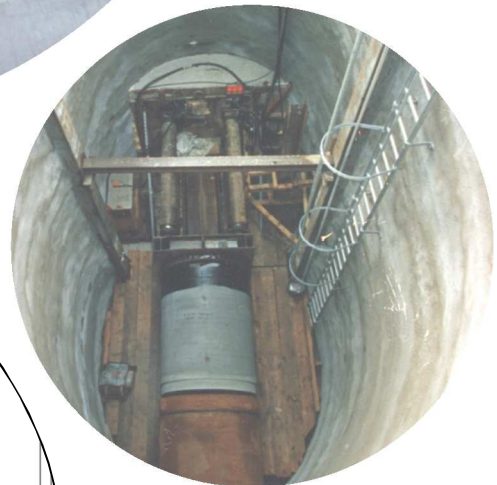

In addition to the long-standing professional experience (over 30 years) of the owner, there are excellent contacts with the surrounding licensing and building authorities.

If necessary, we strengthen our team with competent specialist planners from other disciplines and project-related experts and work closely together with them.

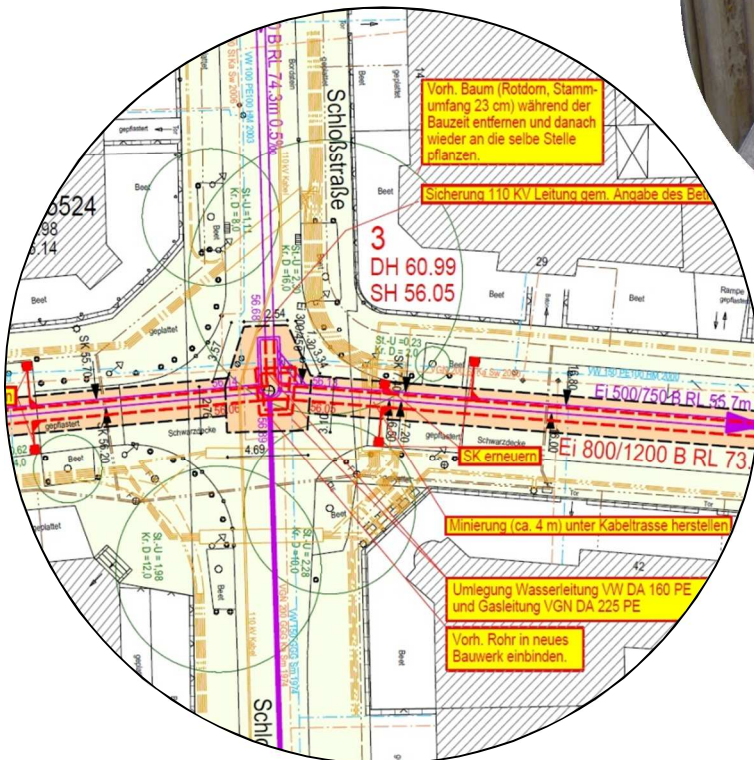

Our office equipment includes high-performance computer systems and color plotters with corresponding current planning and tendering programs.

On the following pages, you will find photos and plan excerpts of planned and executed projects. For further detailed information, please contact us.
